

Tri stool saddle

Saddle chairs help you to maintain an upright posture when sitting. Feet are placed flat on the floor at a greater width than conventional seating. The weight of the legs is taken through the feet; the upper body is stabilized accordingly. The pelvis is held securely in a natural position.

The three cornered tri stool saddle seat is a variation on the traditional saddle.

It provides a more planar seat pan, enabling the sitter to obtain the postural advantages of a saddle seat without the discomfort that some users can experience from the raised saddle pommel or ridge. The tri stool seat pan is both angle adjustable and height adjustable.

Supplied with steel foot ring and castors or glides.
